

# Swine industry of the Republic of Belarus

Vilnius, Lithuania, 30 May – 1 June 2012

# Swine industry of the Republic of Belarus

- 96% of farms are governmental property
- All the governmental farms are attached to the regional meat factories that receive the production at the prices set by the Ministry of Agriculture and Food

# Swine industry of the Republic of Belarus

Swine farms

Regional meat factories

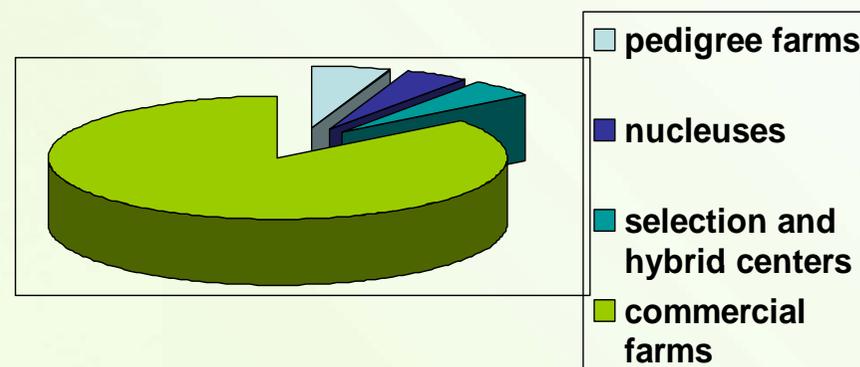

Internal market of the Republic of Belarus

Export (Russian Federation)

# Swine industry of the Republic of Belarus

The structure of the enterprises by function

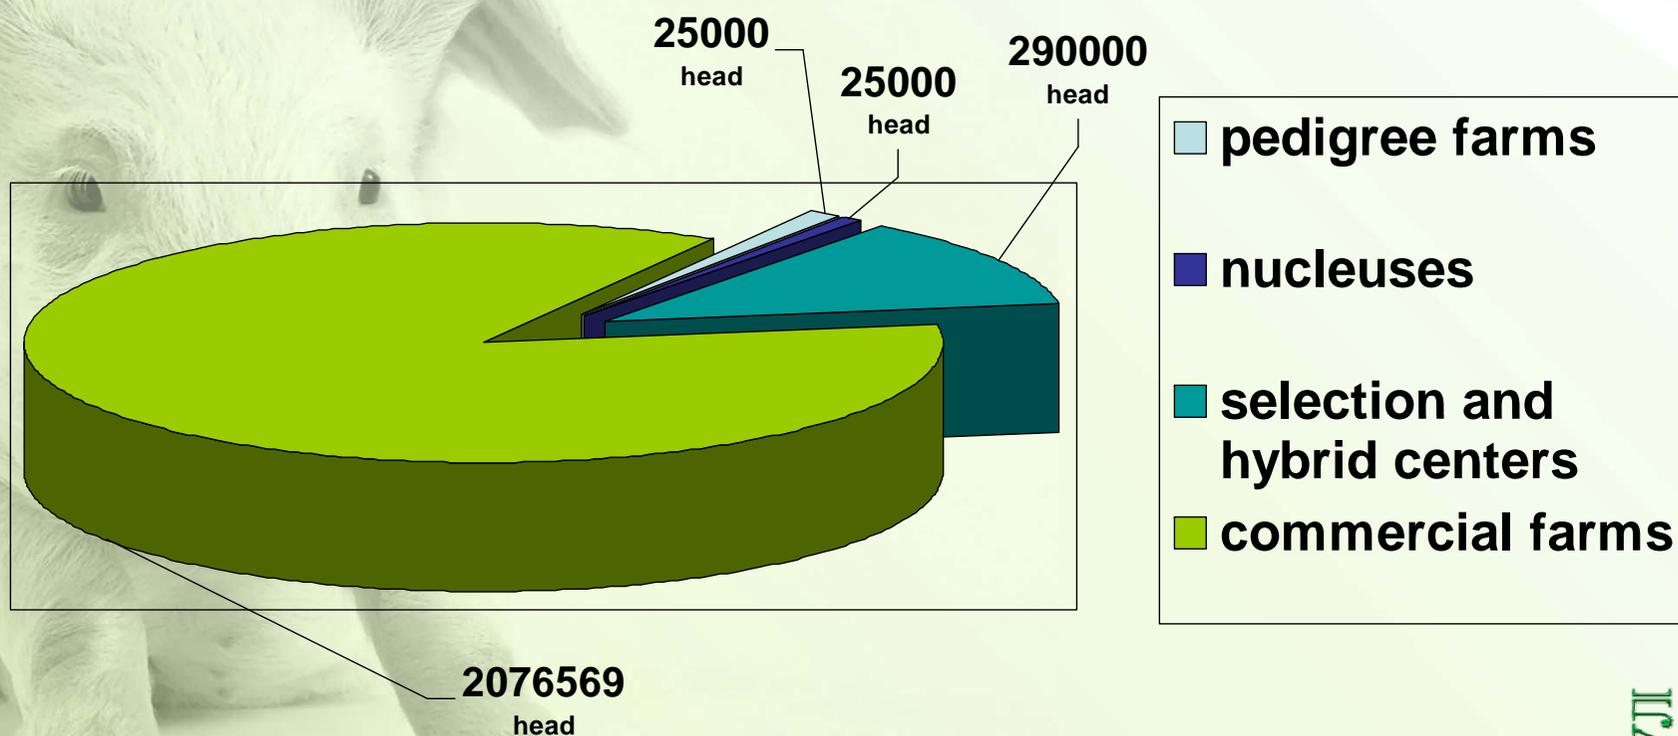

- 6 pedigree farms
- 5 nucleuses
- 5 selection and hybrid centers
- 93 commercial farms

Total of 107 industrial enterprises are under statutory reporting of the Ministry of Agriculture and Food of the Republic of Belarus

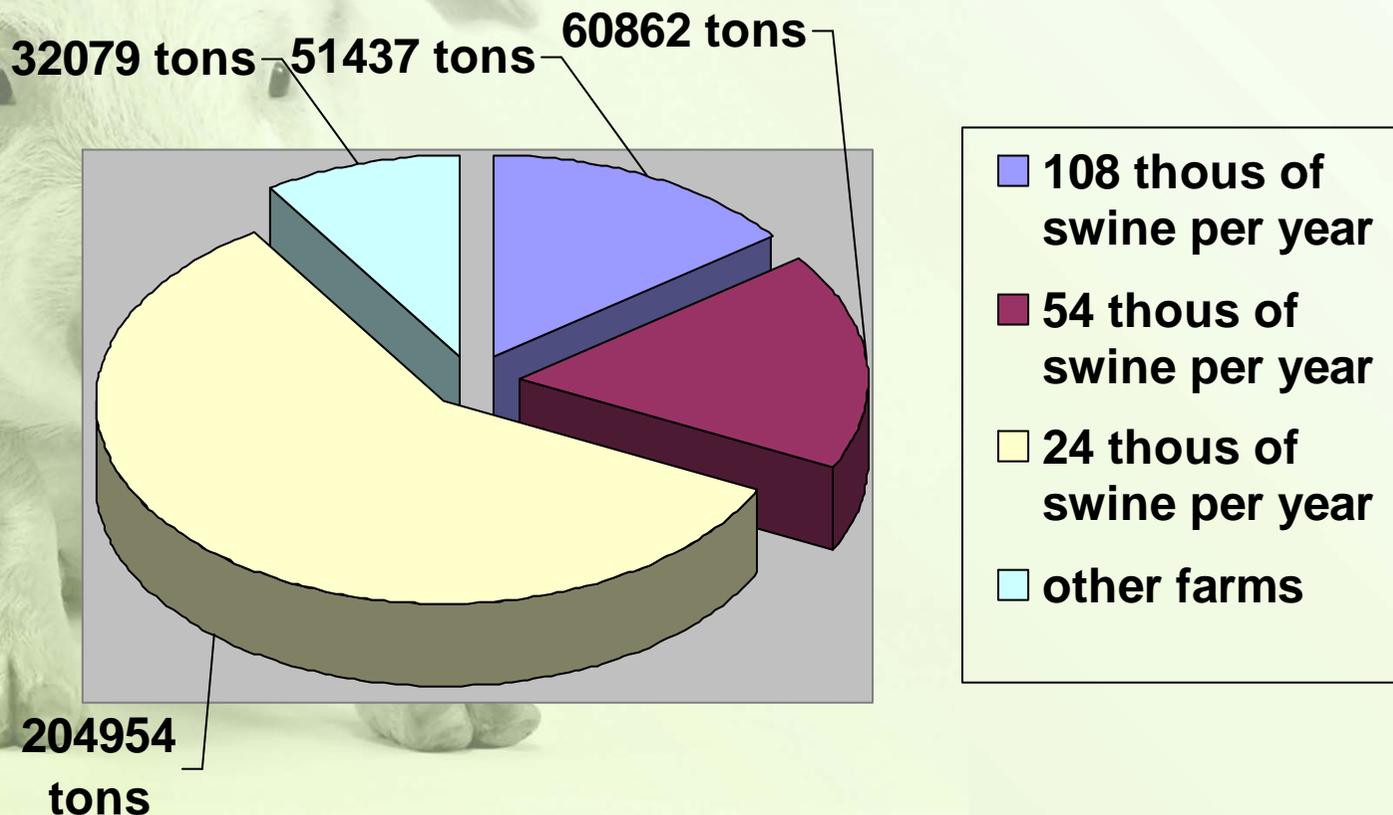

# Swine industry of the Republic of Belarus

The structure of the enterprises by function

# Swine industry of the Republic of Belarus

The share of the enterprises of different capacity  
in the gross output

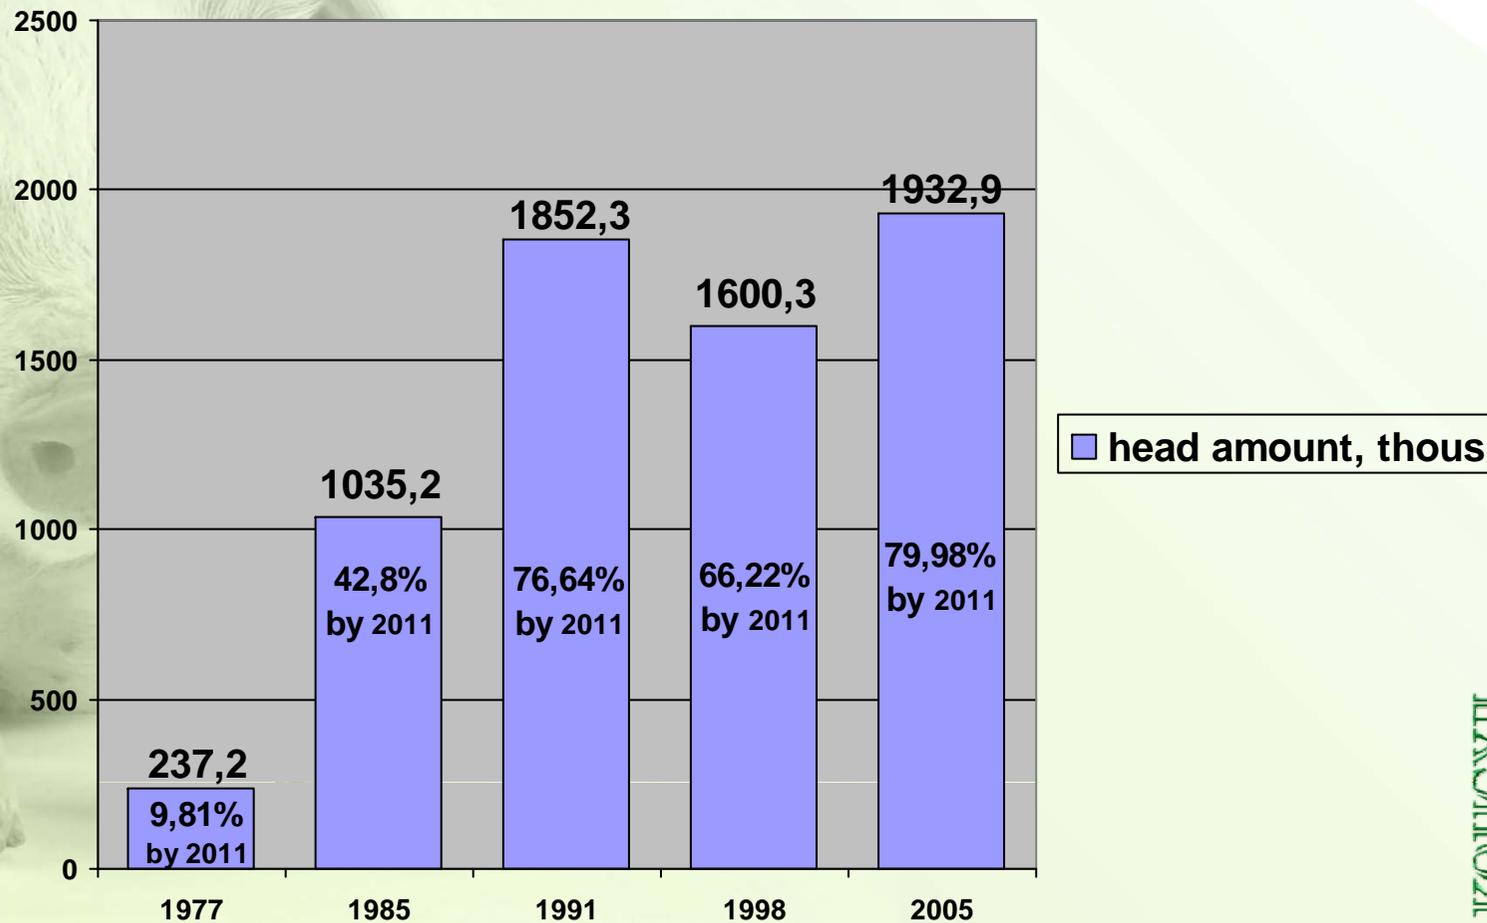

# Swine industry of the Republic of Belarus

All the enterprises are of closed-end type with  
the full production cycle

Development of the swine industry

# Swine industry of the Republic of Belarus

Pork production in the modern history of the Republic of Belarus

# Swine industry of the Republic of Belarus

The results of work in 2011:

- In 2011 the enterprises of the Republic of Belarus produced a total of 441,9 thousand tons of pork\*
- Self-cost of 1 kg of pork – 7312 rubles
- Mean selling price made up 8271 rubles per live weight kilo
- Level of profitability in pig production made up - 13,1%, profitability of sales – 10,5%, on best farms – 29% up to 60%

# Swine industry of the Republic of Belarus

- Feed intake per 1 kg of gain in the Republic in 2001-4,52 feed units, best farms – 2,8-2,9 feed units
- Average daily gain of growers and finishers – 530 g
- Average price for 1 kg of compound feed for the growing period – 2700 rubles\*\*

\* Inclusive of small commercial farms, agricultural production cooperative s

\*\* Mean in the Republic

# Swine industry of the Republic of Belarus

Major effectiveness criterion:

Selling of gain per mean livestock since the beginning of the year\*

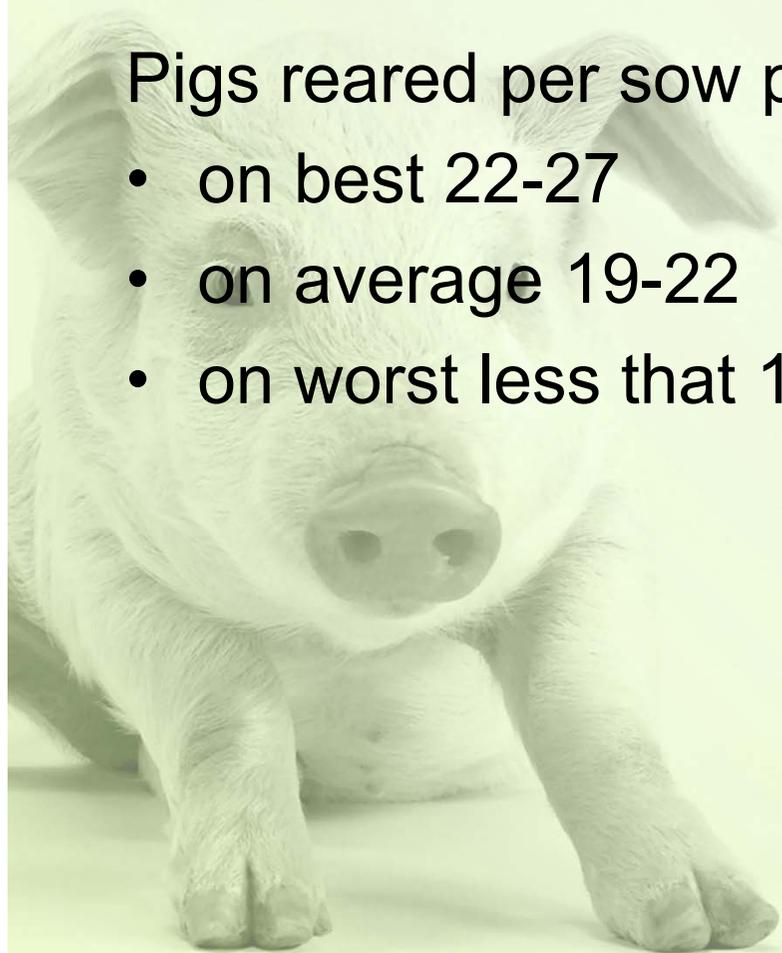

- on best farms – 277,5 kg
- on worst farms – from 86 kg

\* Report data of the Ministry of Agriculture and Food for 2011

# Swine industry of the Republic of Belarus

Pigs reared per sow per year:

- on best 22-27
- on average 19-22
- on worst less that 16

# Swine industry of the Republic of Belarus

Livability indices as for groups of animals

- in group 0-2 (0-35 days) elimination varies in the range of 7 – 10%
- in group 2-4 (35-105 days) elimination varies in the range of 2 – 23%
- during finishing period (80-200) 1,5 - 10% (17%)

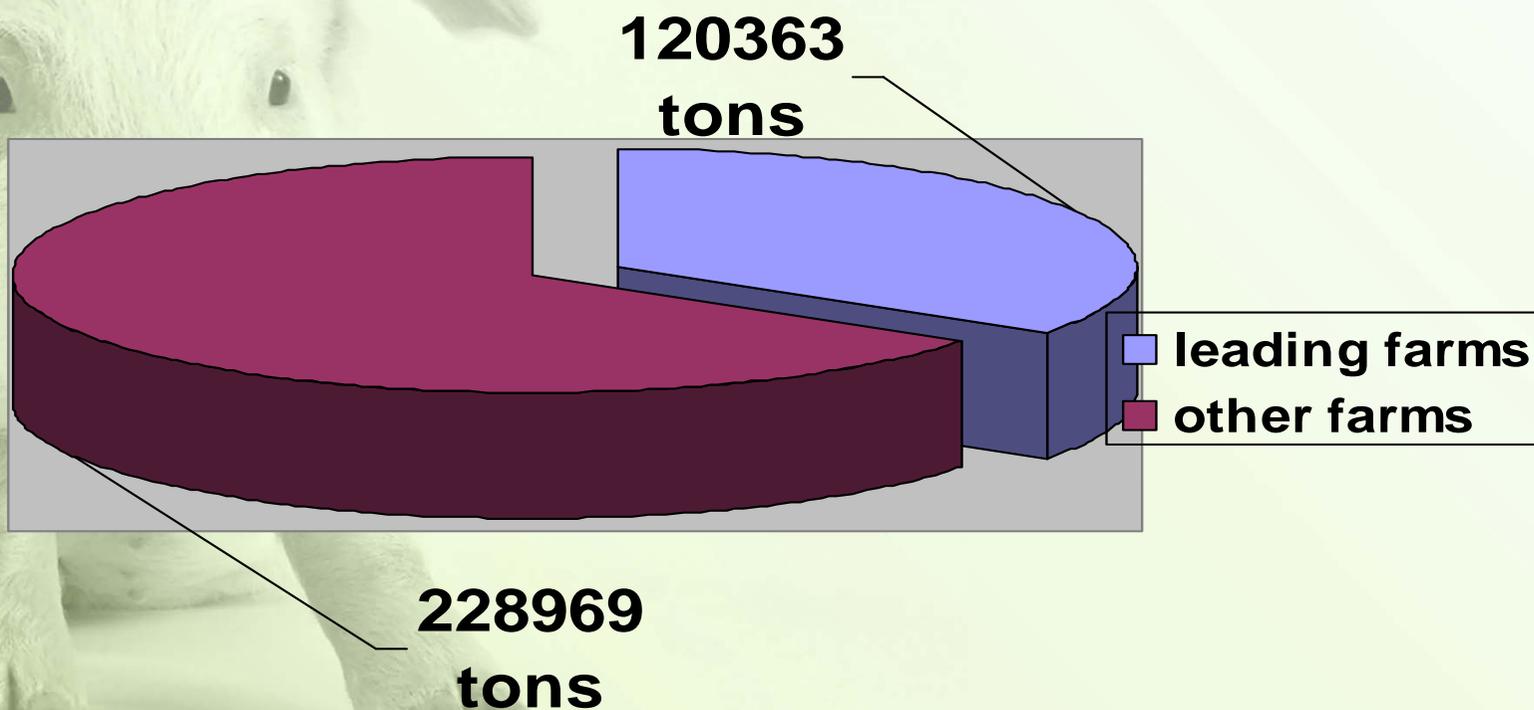

# Swine industry of the Republic of Belarus

Nonproduction elimination for the whole rearing period on farms

- best – 12 – 15%
- average – 15 – 20%
- worst – 25 – 45%

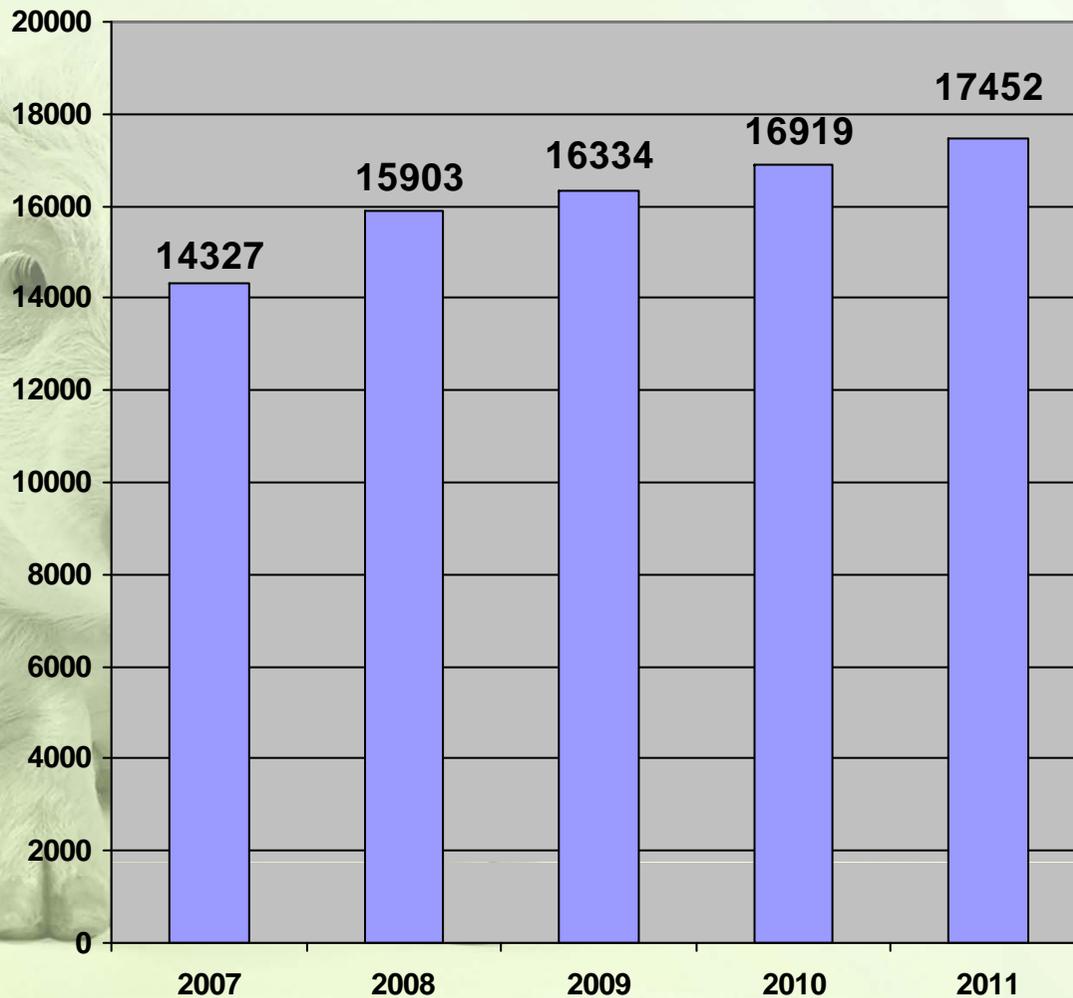

# Swine industry of the Republic of Belarus

The share of the enterprises in the gross output

## OJSC Belovezhskiy, Kamenets region

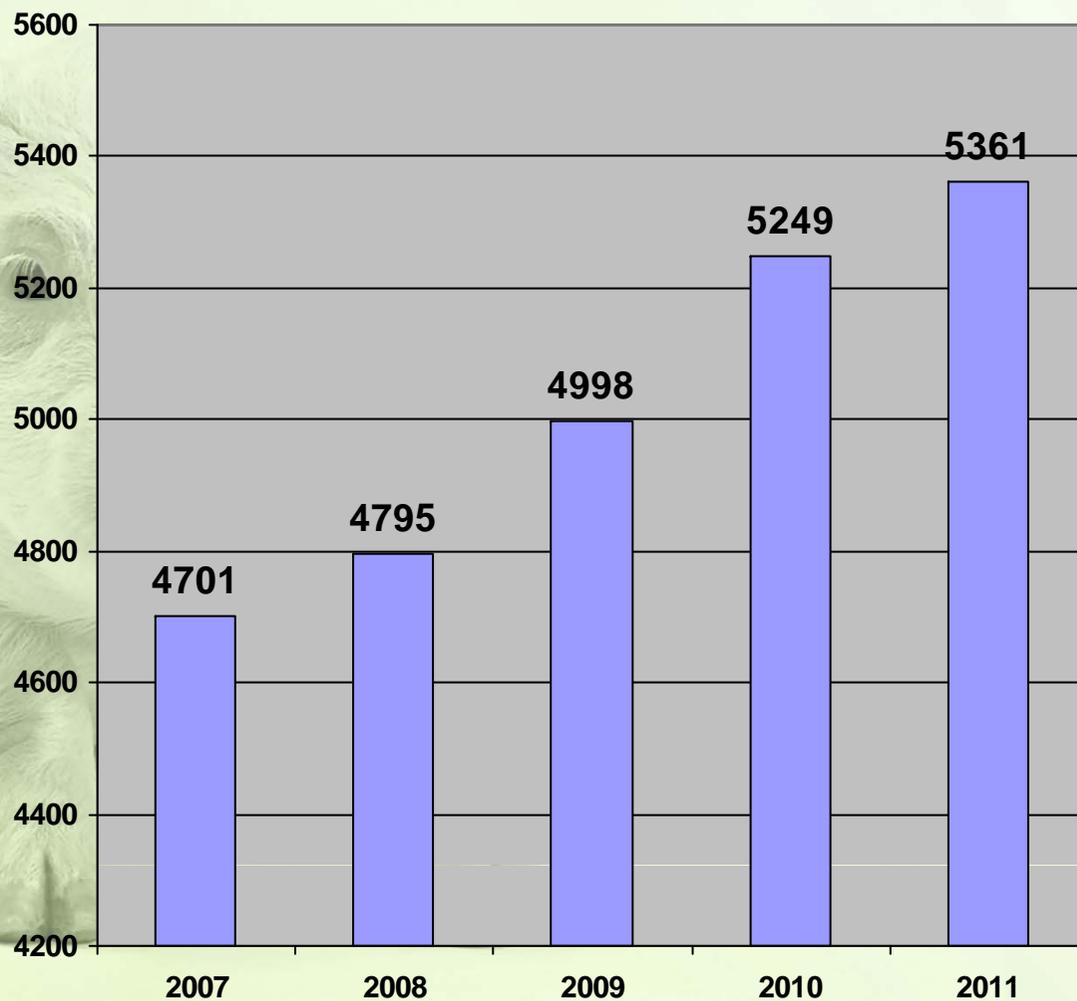

Real livestock availability –  
90203 head

■ achieved gain, tons

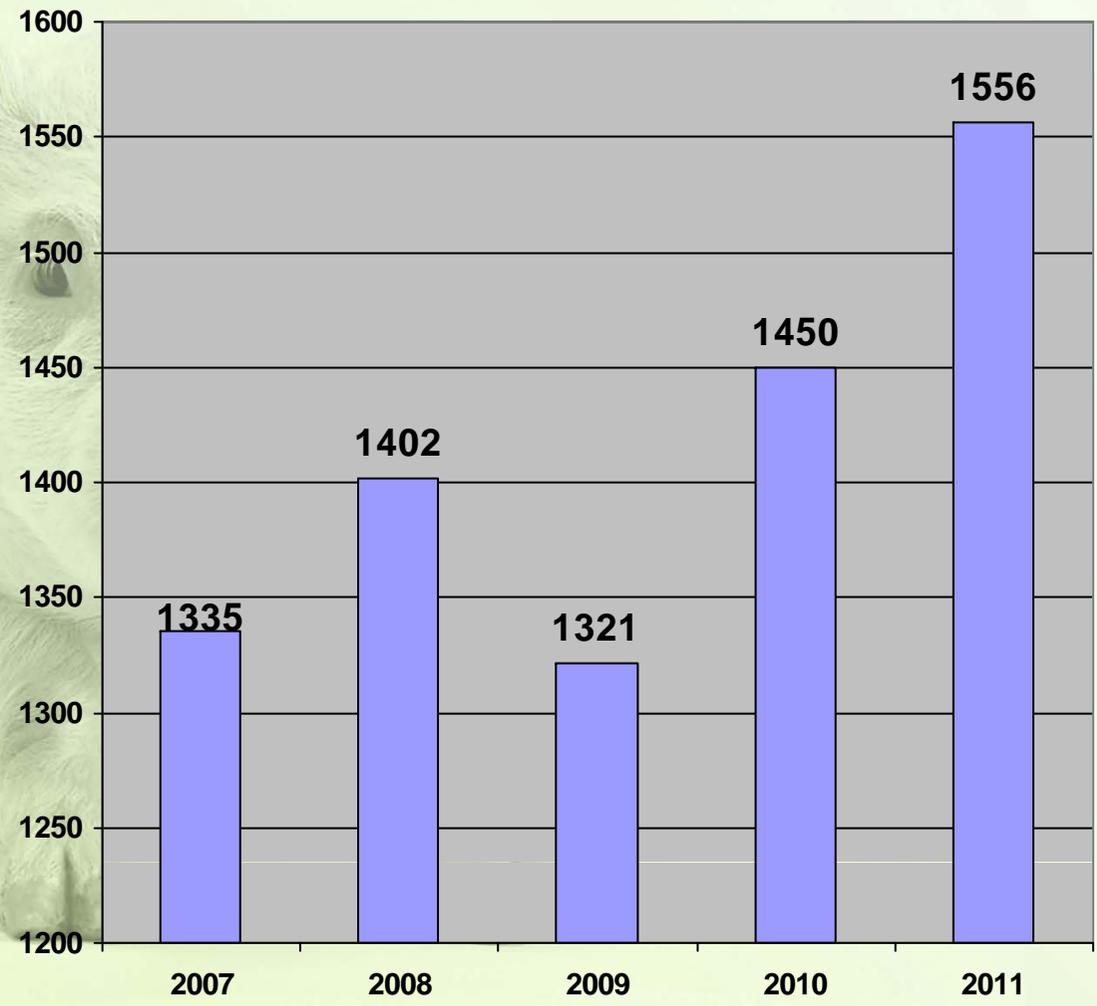

# OJSC Agroplant Voskhod, Mogilev region

Real livestock availability –  
26719 head

■ achieved gain, tons

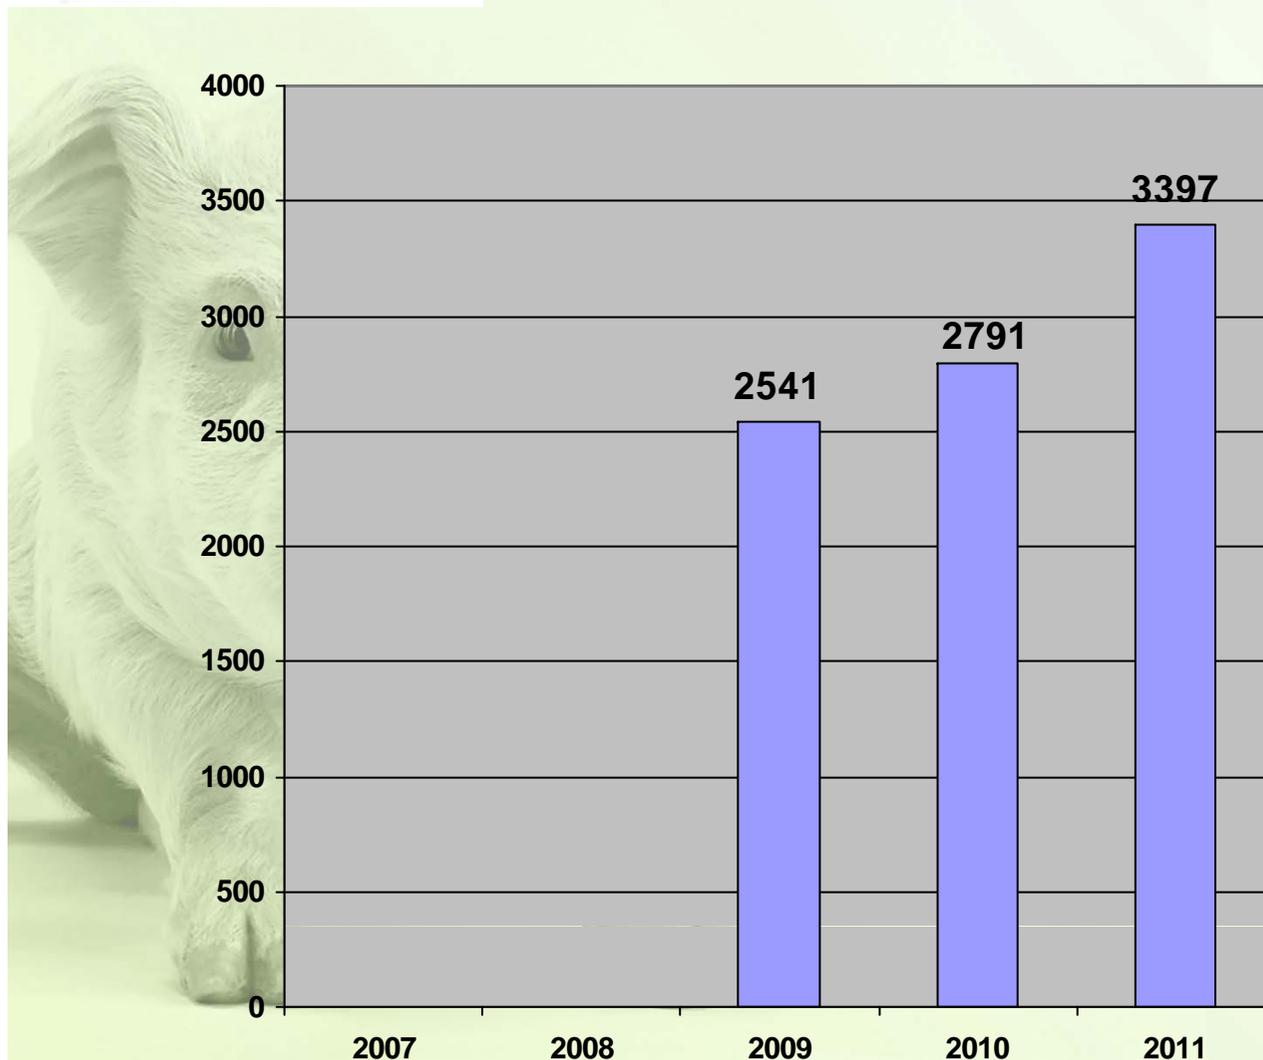

Real livestock availability –  
8031 head

■ achieved gain, tons

# OJSC Aleksandriyskoe, Shklov region

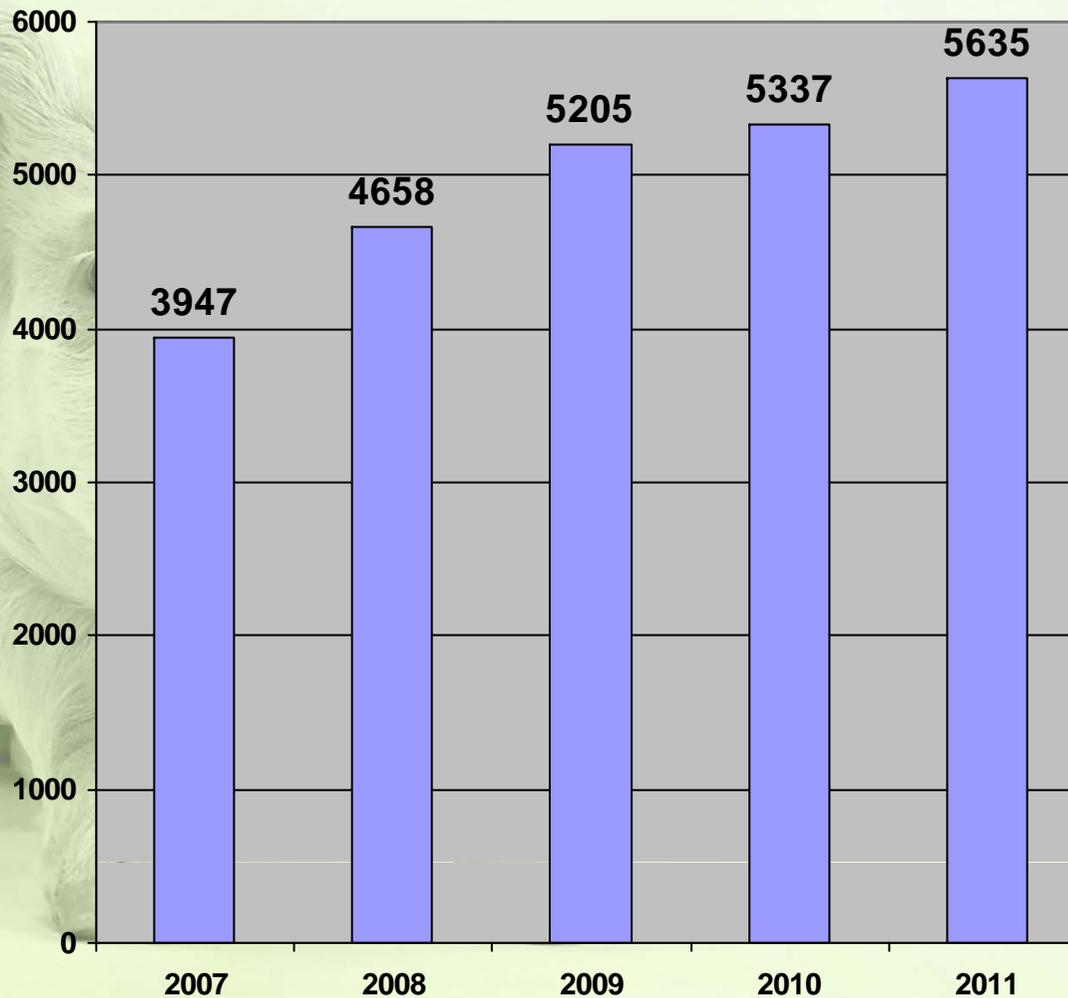

Real livestock availability –  
21174 head

■ achieved gain, tons

# Production private unitary enterprise Rosskiy Feed factory, Volkovysk region

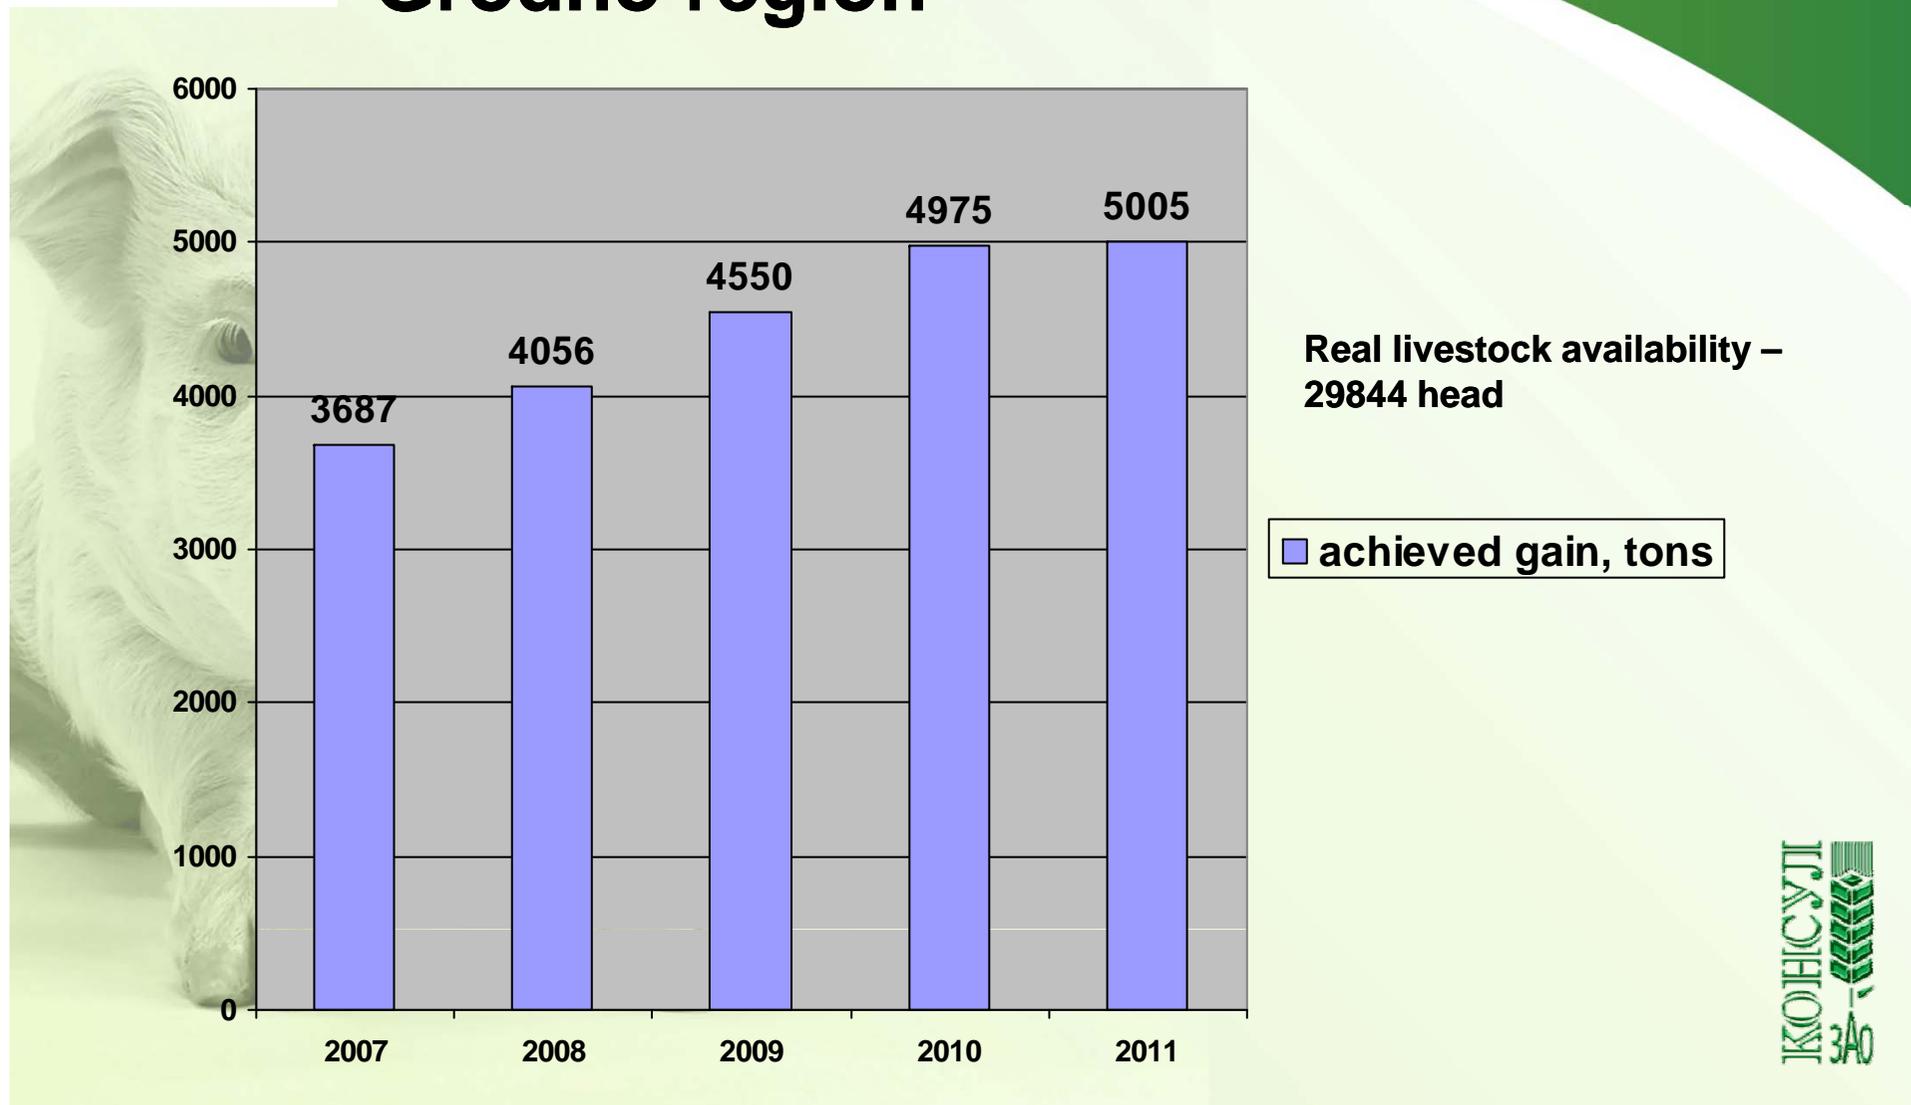

Real livestock availability –  
31214 head

■ achieved gain, tons

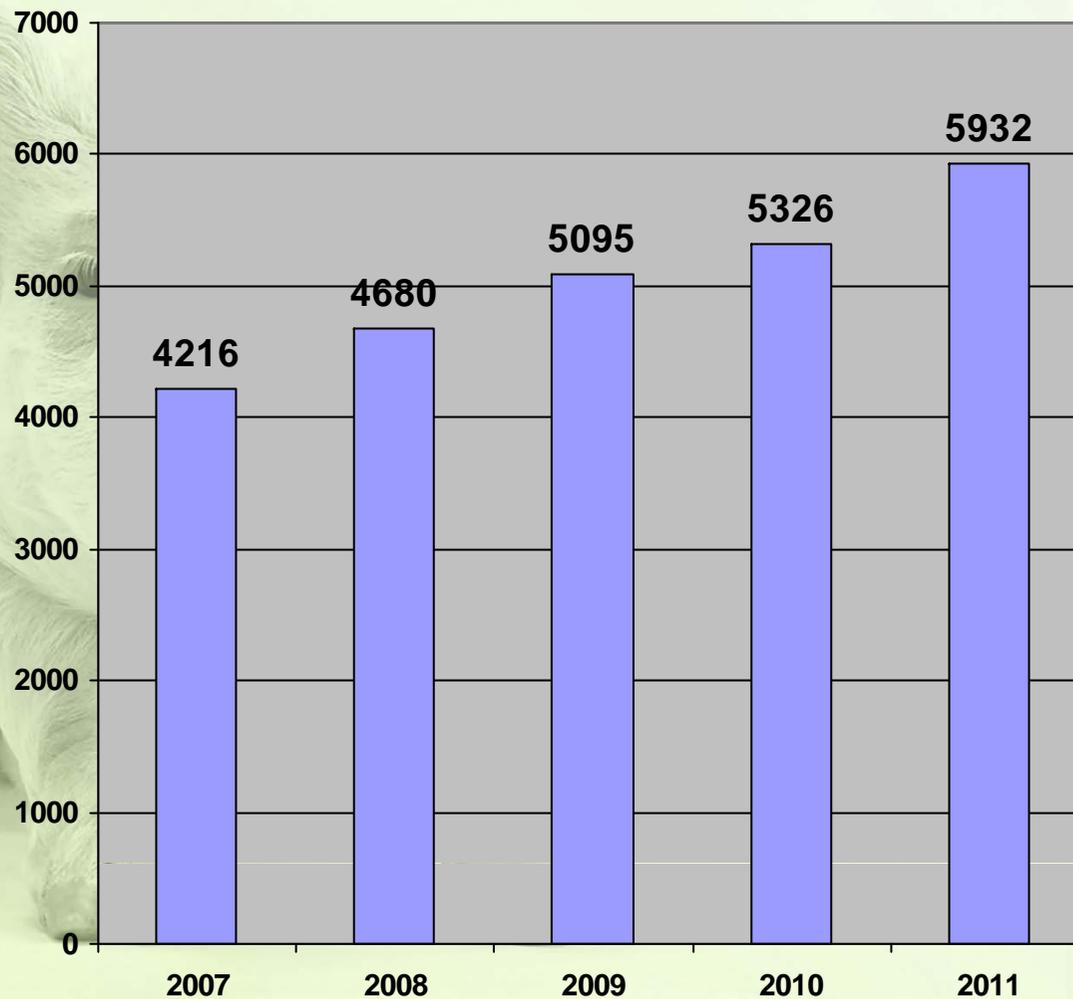

# Agricultural production cooperative Obukhovo, Grodno region

# Agricultural production cooperative Ortyabr-Grodno, Grodno region

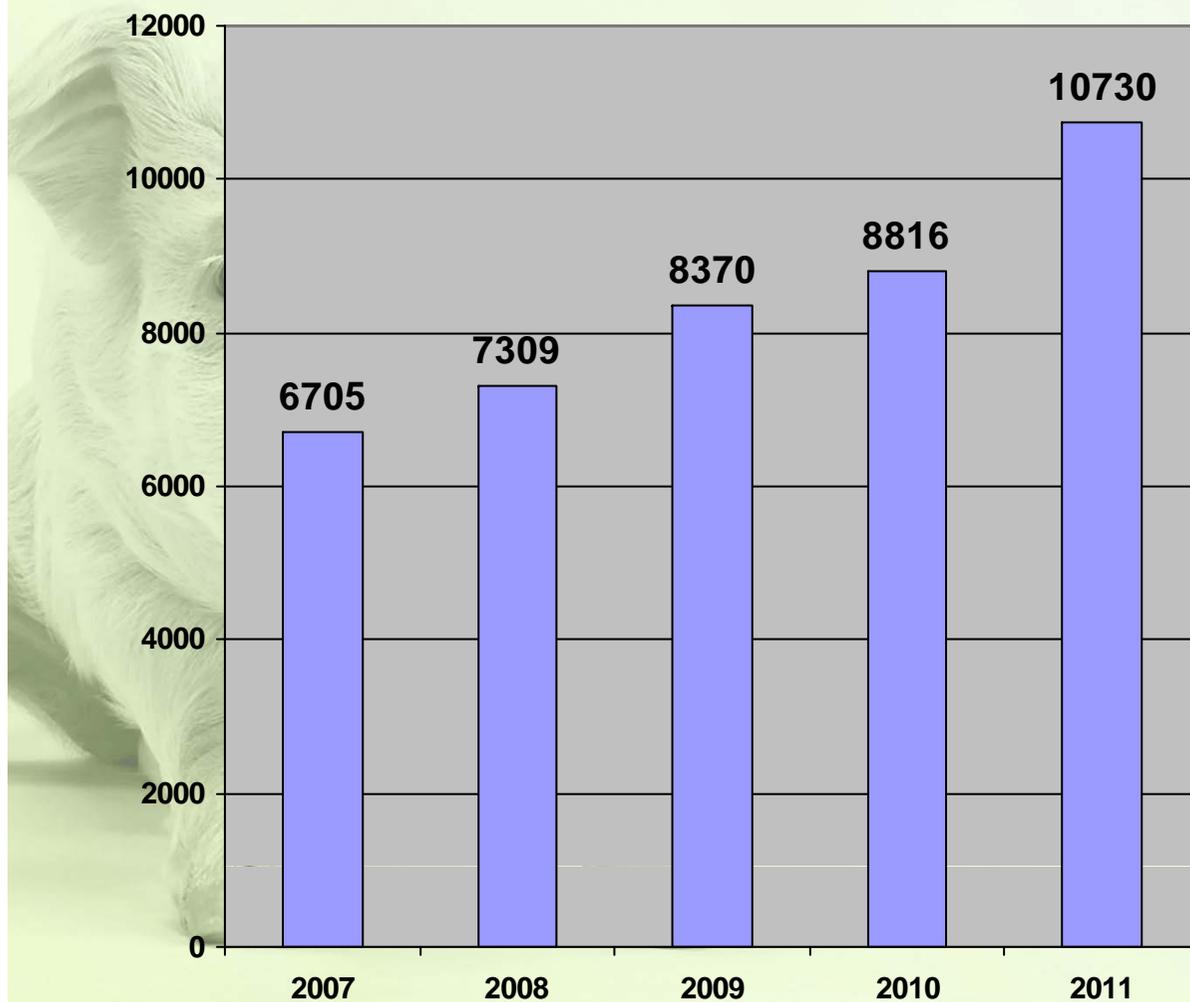

Real livestock availability –  
27440 head

■ achieved gain, tons

ОРО БАСНАНУХИ

# Selection and hybrid center Vasilishki, Shchuchin region

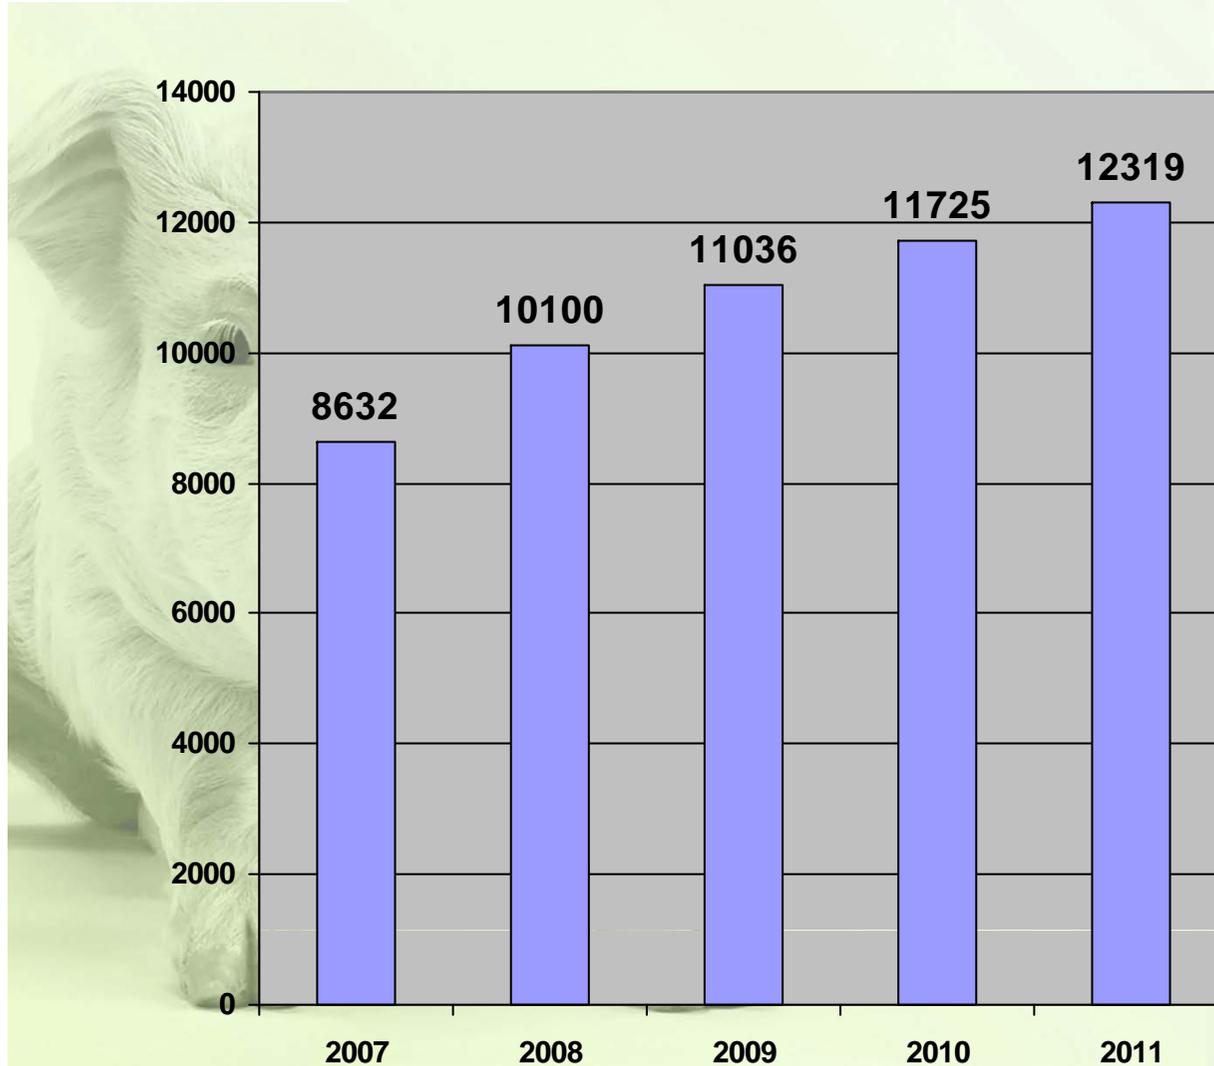

Real livestock availability – 71032 head

■ achieved gain, tons

# OJSC Baranovichi Cereal products plant, Pork production complex Vostochnoe, Baranovichi region

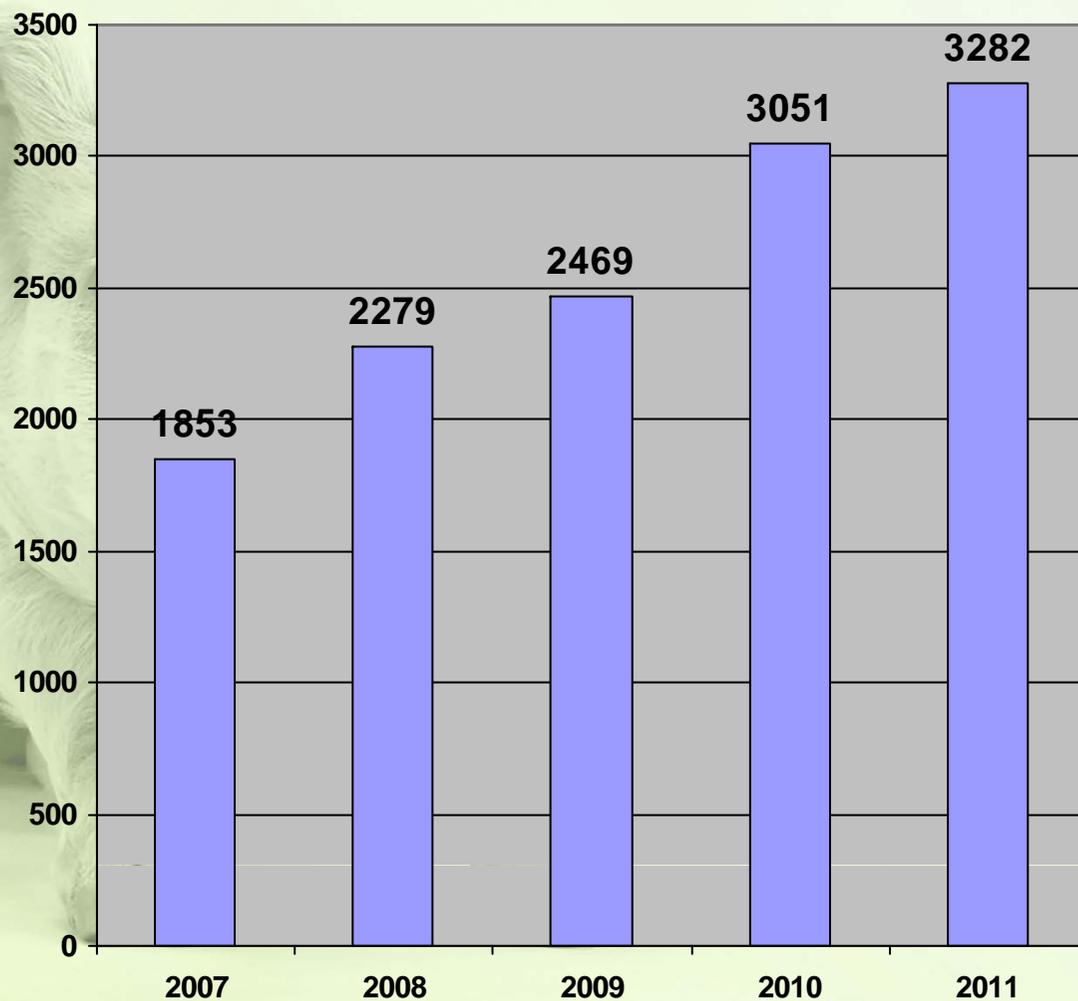

Real livestock availability –  
67635 head

■ achieved gain, tons

# OJSC Slutsk meat factory

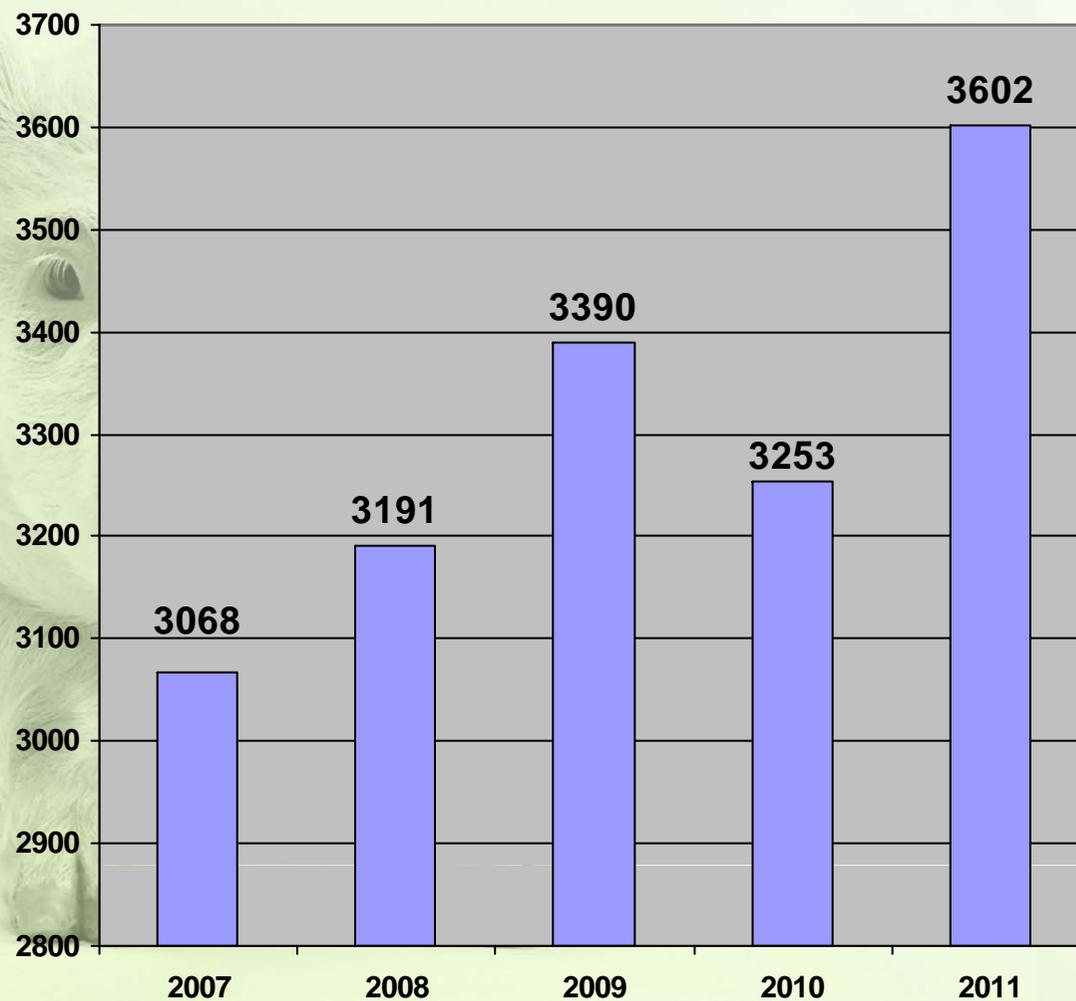

Real livestock availability –  
20600 head

■ achieved gain, tons

## OJSC Zhuravlinoe, Pruzhany region

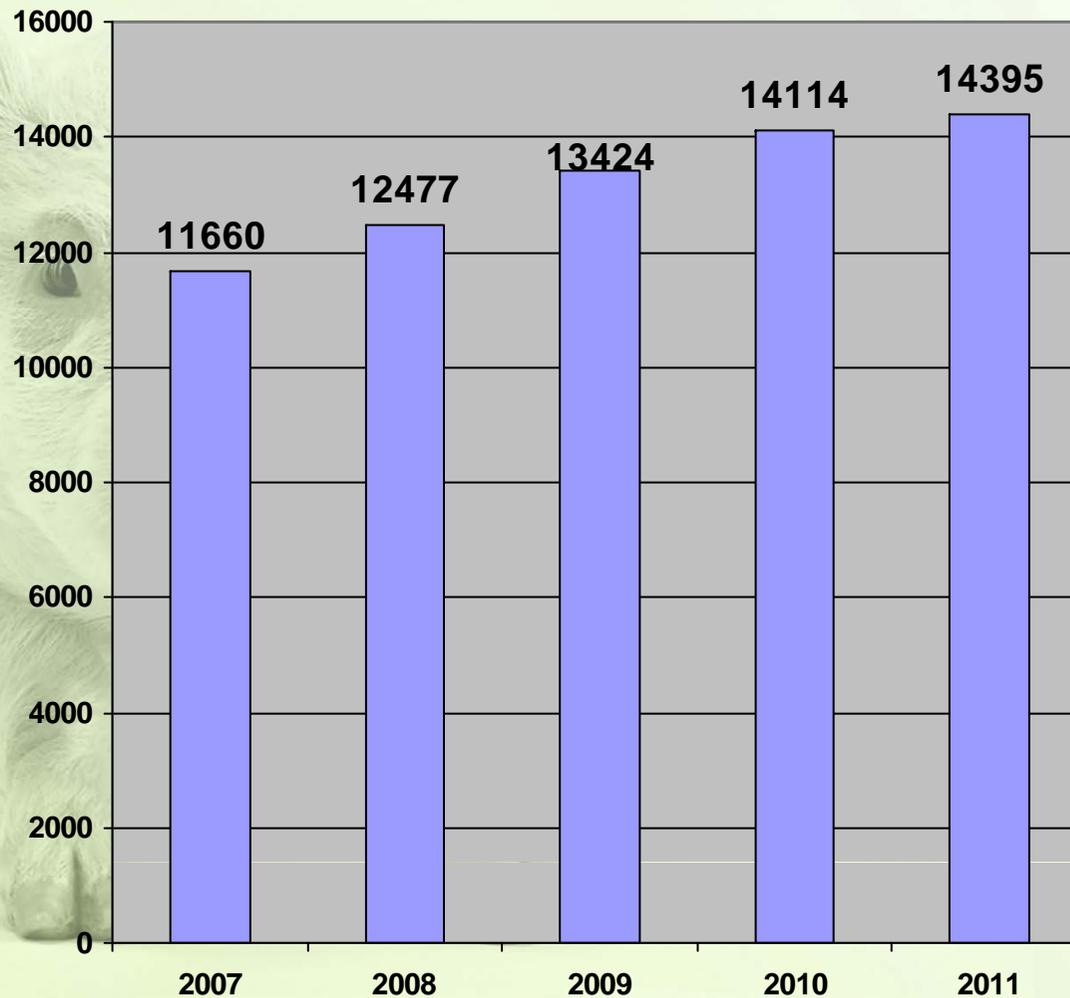

Real livestock availability –  
18453 head

■ achieved gain, tons

# OJSC Combine state farm Sozh, Gomel region

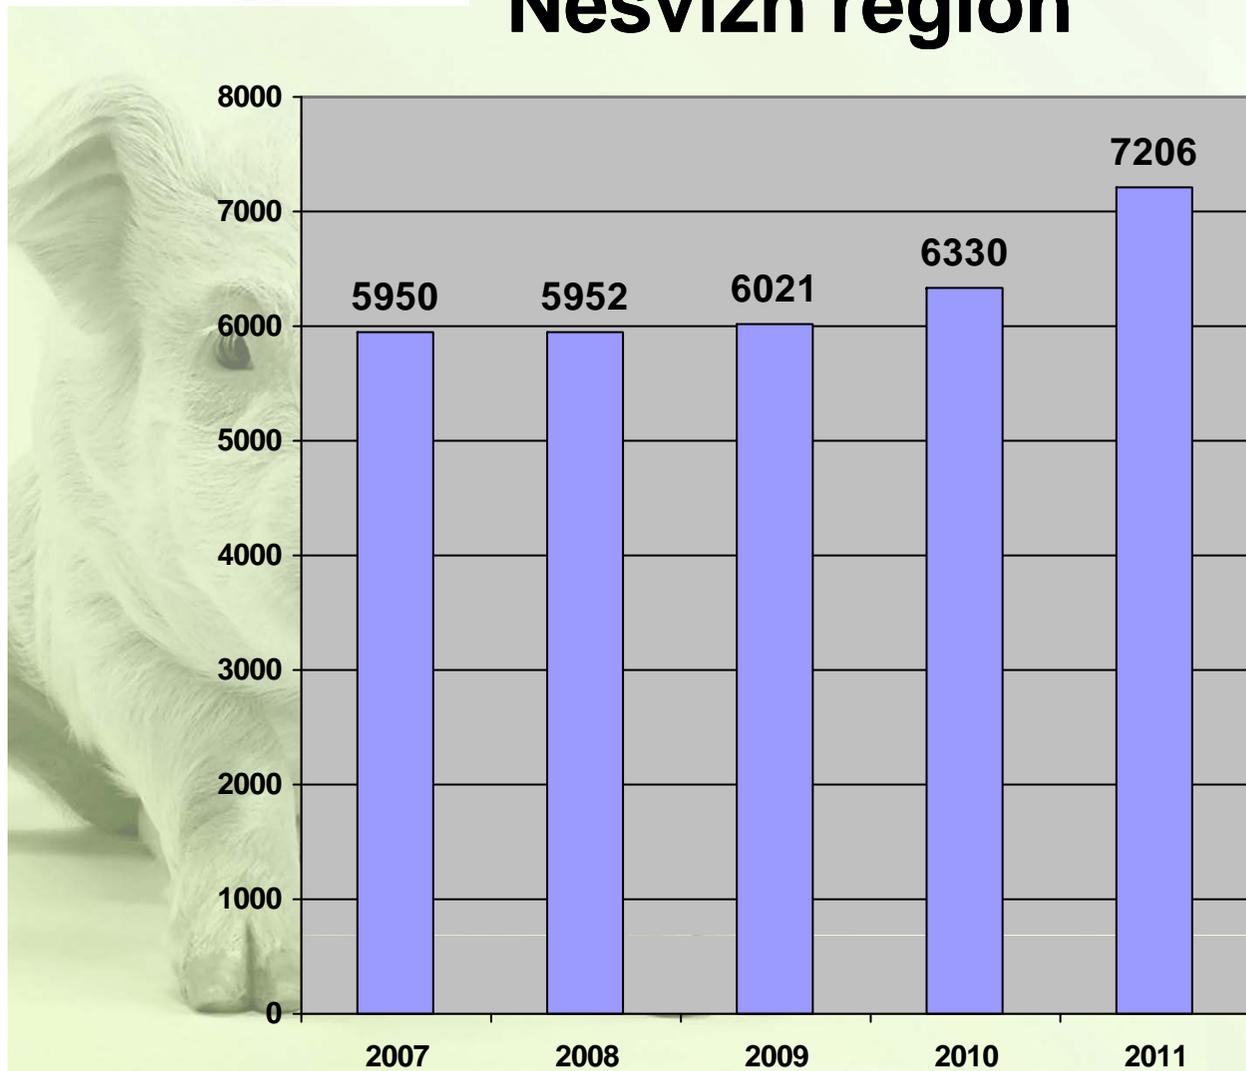

Real livestock availability –  
90250 head

■ achieved gain, tons

# Agricultural production cooperative Agricultural plant Snow, Nesvizh region

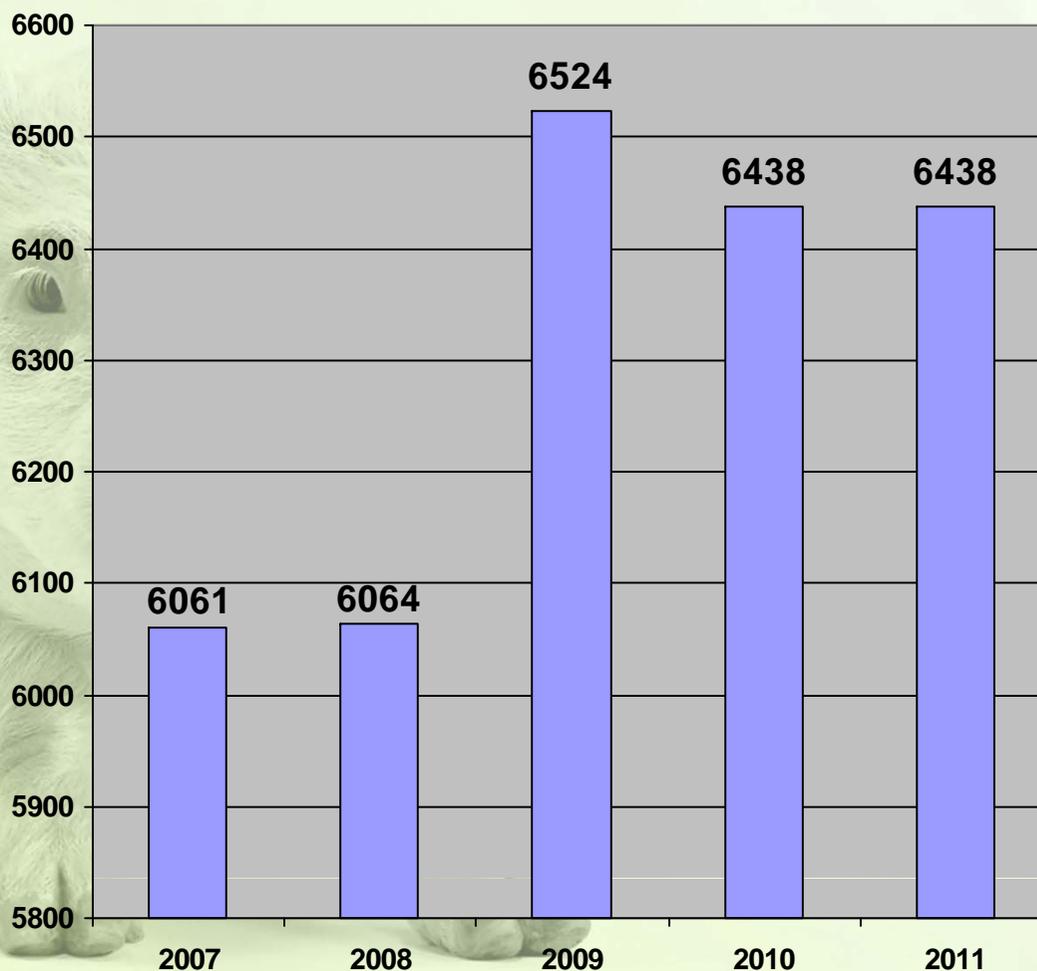

Real livestock availability –  
32400 head

■ achieved gain, tons

# Municipal agricultural unitary enterprise Zarya, Mozyr region

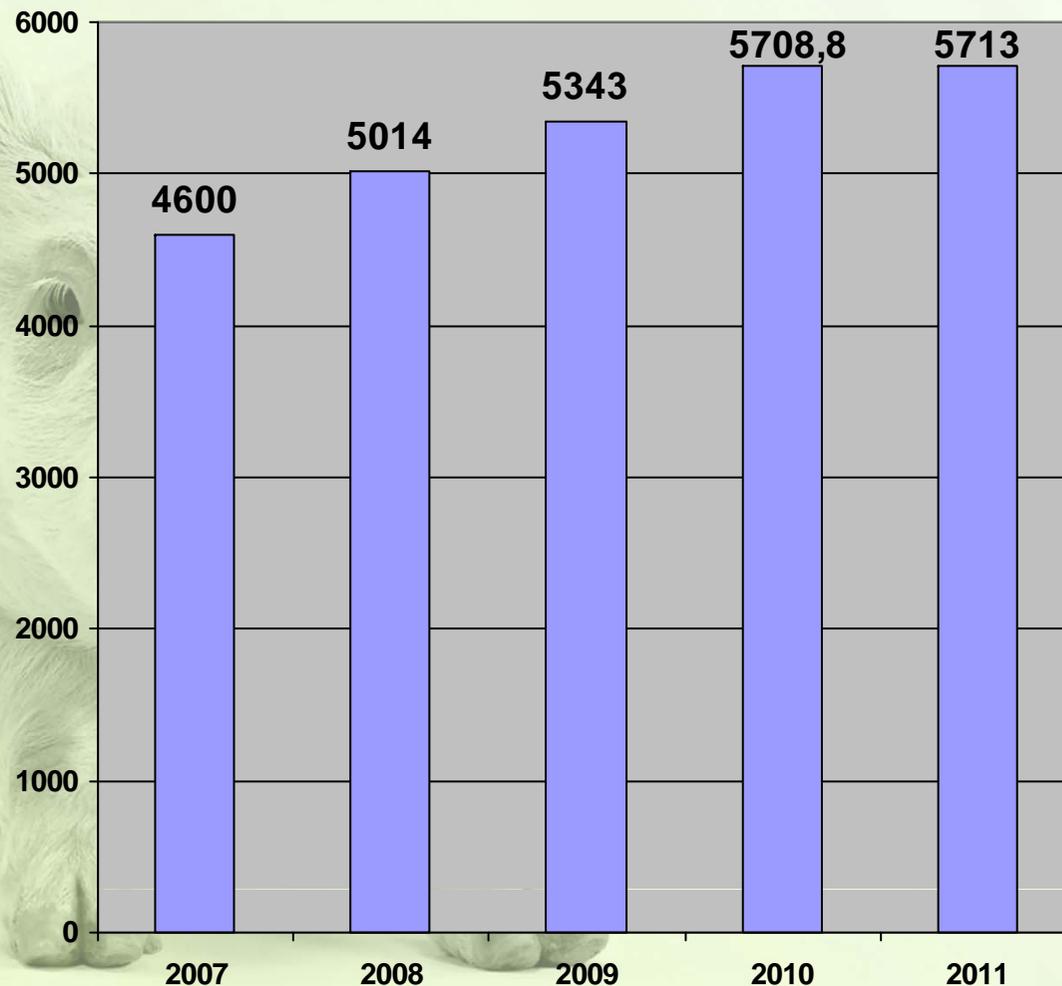

Real livestock availability – 39765 head

■ achieved gain, tons

# Subsiriary Soviet Belarus, Rechitsa region

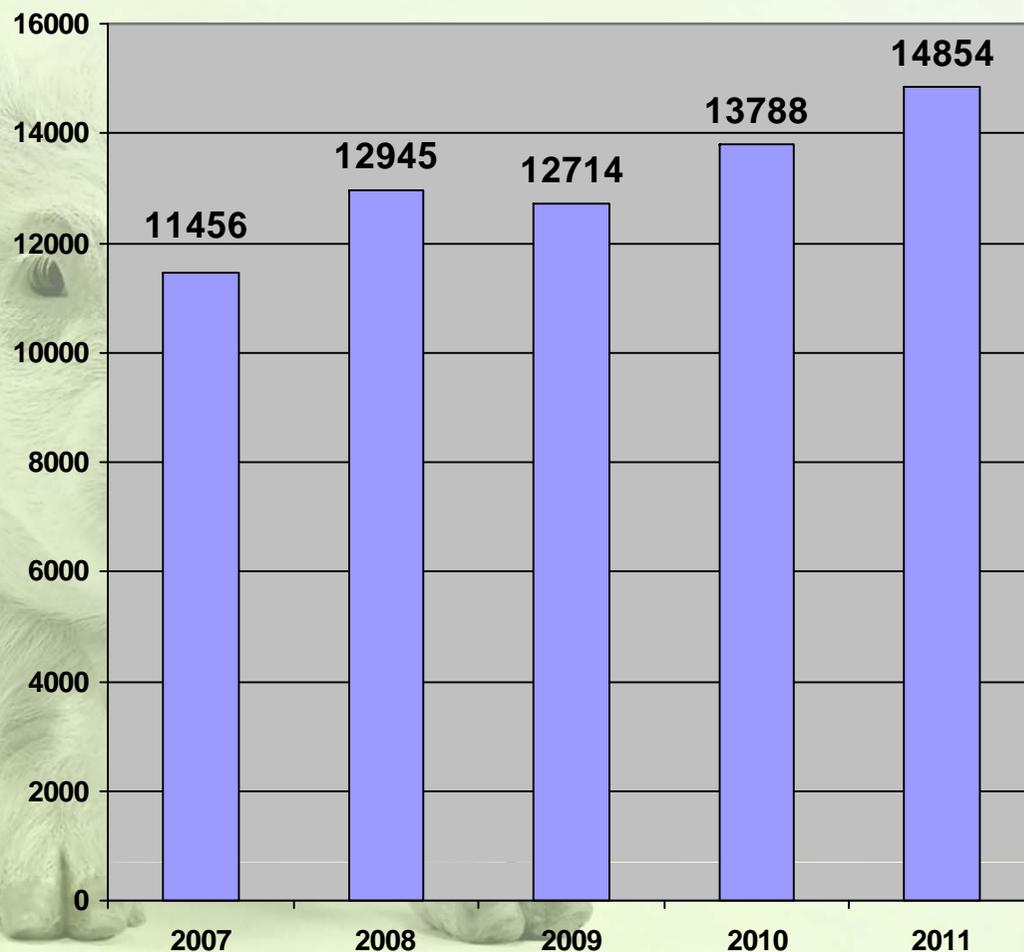

Real livestock availability –  
31012 head

■ achieved gain, tons

# State enterprise Selection and hybrid center Zapadniy, Brest region

Real livestock availability –  
89887 head

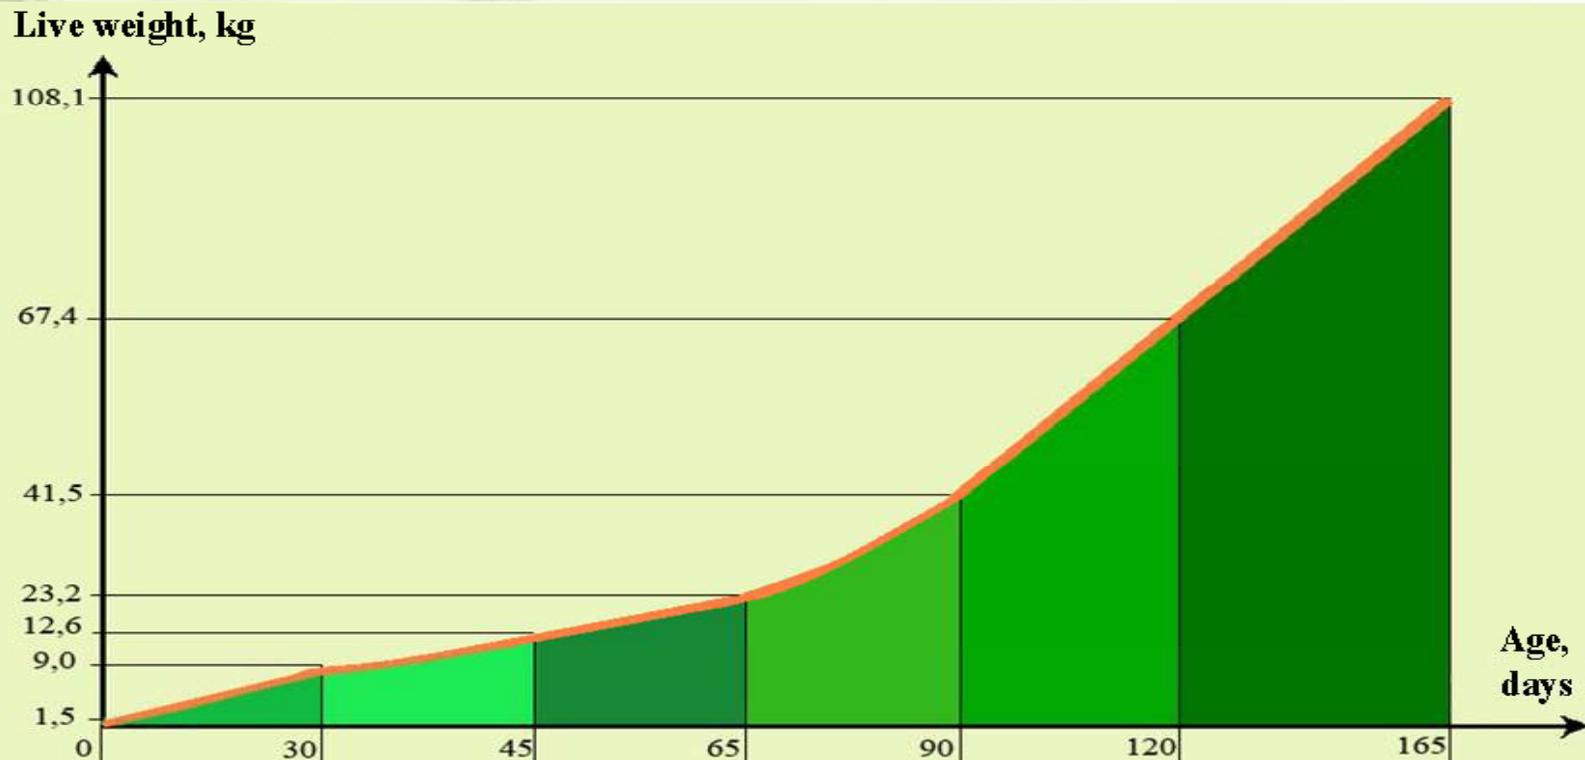

■ achieved gain, tons

# Swine industry of the Republic of Belarus

## Pedigree work

- Mainly three-breed rotation cross with the use of purebred boars:
- Landrace, Large White and Duroc, less frequently Pietrain
- or four-breed with the use of DxG, DxP twobreed

**Major threats to the veterinary state:**

# • Transit location

- Risk of ASF transfer from East (no borders)

- 
- **Constantly increasing susceptibility of the animals**
  - **Enterprises lack specialists and operating personnel**
  - **Lack of personnel motivation**
  - **Binding to the regional feed-milling enterprises that are not interested in the quality of feed**
  - **Lack of knowledge**
  - **Out-of-date technologies of pig rearing**

# Swine industry of the Republic of Belarus

Relatively good epizootic stare is achieved by:

- Relatively small volume of imports of pigs
- Remoteness of the pig-breeding complexes from roads and population
- Closed-end type of production
- Strict requirements to biosecurity
- Animal transfer on the territory of the Republic of Belarus controlled by the government
- Traditional staff tied to the agricultural settlements (villages)

# Swine industry of the Republic of Belarus

## Infectious factors of elimination Respiratory pathology

### Of bacterial etiology

- *Haemophilus parasuis*
- *Actinobacillus pleuropneumoniae*
- *Streptococcus suis*
- *Pasteurella multocida*
- *Bordetella bronchiseptica*
- *Mycoplasma hyopneumoniae*

### Of viral etiology

- PCV-2
- PRRSV
- ADV

# Swine industry of the Republic of Belarus

Diseases caused by:	
one pathogen	opportunistic pathogens (together with the existing environmental factors)
Classical and African swine fever	Respiratory system (PRDS)
	Reproductive and respiratory system, PRRS – pulmonic form
Foot-and-mouth disease; hand-foot-and-mouth disease	Porcine post-weaning diarrhea (PPWD)
Inflammation of the gastrointestinal tract due to coronavirus	Streptococcal infection
Aujeszky's disease*	Mycoplasmal pneumonia
Parvovirus disease	Atrophic rhinitis
Fever*	Pleuropneumonia
Reproductive and respiratory system, PRRS* – reproductive form	Glasser's disease
Brucellosis	Intestinal hyperplasia
Tuberculosis	Colibacteriosis
Anaerobic enterotoxemia in piglets	Rotaviral infections
Dysentery*	
Salmonellosis*	
Leptospirosis*	
Red fever*

						Salmonellosis ( <i>Salmonella choleraesuis</i> , <i>typhimurium</i> )											
				Isosporiasis <i>I.suis</i>													

# Swine industry of the Republic of Belarus

## Factors making it difficult to maintain high health status of livestock

- Presence of many pathogens (stationary)
- Technical condition of rooms
- Not always adequate feed
- Low personnel motivation
- Poor diagnostic and procedural basis
- Administrative pressure by the authorities (import substitution, gross figures, lack of knowledge)

# **Key points for work efficiency improvement of swine enterprises in Belarus**

# 1. Effectiveness improvements of usage of maternal stock, “Program 30”

- Delivery of boars
- Rearing of replacement gilts
- Insemination effectiveness improvement
- Improvement of work in the farrowing area

## 2. Feed effectiveness improvement

- Mycotoxins control
- Stability of formulations
- Quality control of protein and grain raw materials

### 3. Improvement of veterinary well-being of farms

- Timely and quality diagnosis
- Modern preventive measures
- Maintenance of conditions corresponding to the improving genetics
- Knowledge improvement of the personnel

## **4. Reconstruction and re-equipment of farms**

# Old farm

# Improved old farm

# New farm

**Thanks for your attention.**
